## EDUCATION

**BSc (Hons) Software Engineering - Sunway University × Lancaster University** Expected Aug 2027  
GPA 3.7 · Dean's List every semester · Led cross-cultural group projects in an international student cohort

**Software Engineering - Alma Almaty Management College** 2021 - 2024  
GPA 3.6

## EXPERIENCE

**Lab Apprentice - HUMAC Lab** Feb 2025 - May 2026

- Coordinated task tracking and sprint planning via Jira for a cross-functional team building a library robot from concept to deployment.
- Assembled the robot's electrical and mechanical components, and set up its networking infrastructure - configuring access points and routers for reliable on-site wireless connectivity.
- Developed the Datastation App to scan library books and sync them over the network into the robot's database, handling 200+ book scans in a single sync.
- Tested and debugged hardware-software integration, resolving syncing issues between the scanning app and the robot's onboard systems.

Python Raspberry Pi SQLite Jira Networking

**Automation Intern - Galanz Bottlers** Oct 2023 - Dec 2023

- Automated the company's daily birthday-card process end-to-end - extracting that day's birthdays from the employee database, transforming the data into personalized messages, and auto-generating and emailing cards to every department, removing a manual daily HR task.
- Built a Telegram bot query interface that returns any employee's details in a single message, replacing a multi-click lookup process and cutting search time for HR and staff.
- Built an HR FAQ Telegram bot backed by a database of common employee questions, escalating unanswered queries to a dedicated web dashboard - reducing repeat walk-in questions to HR.
- Built a Telegram bridge to the company's IT Helpdesk system, extending IT support access to offices outside Almaty with no direct system access.

Python Telegram Bot API MySQL Automation

## PROJECTS

**AI-Powered Telegram Expense Tracker Bot**

- Built a Telegram bot query interface using Claude AI to automatically record and categorize personal expenses, generating aggregated spending reports for any custom date range to support quick financial decisions.

Python Claude AI MySQL

Discord Member Verifier

- Automated student verification for a university club's Discord server using Google Sheets as a live member registry - verified 15+ members, cutting onboarding time by 5–10 minutes per signup.

Python   Google Sheets API   Discord Bot

AI Growth Coach Platform

- Developed a full-stack web platform, used by 100+ users, to track personal goals, habits, and daily reflections guided by an AI coach - built the frontend in HTML/CSS/JavaScript and the backend and database logic in PHP, integrated Node.js for the AI coaching features and Razorpay for subscription payments, and deployed it live on Namecheap hosting.

PHP   Node.js   JavaScript   Razorpay

SKILLS

|                      |                                                                                         |
|----------------------|-----------------------------------------------------------------------------------------|
| Fundamentals         | Data Structures & Algorithms, Object-Oriented Programming                               |
| Languages            | Python, SQL, Java, JavaScript, TypeScript, PHP                                          |
| Tools & Platforms    | REST APIs, MySQL, Git, Telegram Bot API, Node.js, Claude AI / LLM integration, Razorpay |
| Deployment & Hosting | Vercel, Namecheap, Hostinger                                                            |

LANGUAGES

|         |        |
|---------|--------|
| English | Fluent |
| Chinese | HSK 1  |
| Russian | Native |
| Kazakh  | Native |

ACHIEVEMENTS

- WorldSkills Competition (2024)** - 3rd place; built a full-stack web, mobile, and desktop booking app in a 2-day competition.
- Programming Competition (2023)** - Competed in a college-level algorithmic problem-solving contest.
- Step Academy (2022)** - Completed a 3-year programming and design program (HTML/CSS, Python, C++, Java, Swift, JavaScript, Unity, Arduino, IoT).
