Final-year Software Engineering student (BSc Hons, Sunway University), eager to apply for the AI Intern position on Lenovo IT's AI Solutions & Innovation Team. Can contribute hands-on experience building applied AI/ML systems - including a computer vision pipeline for license plate detection and OCR, real-time video processing (face detection, blurring, on-frame annotation) with OpenCV, and a trained scikit-learn regression model deployed as a live web app - along with solid Python fundamentals and LLM/API integration experience (Claude AI, OpenAI). A fast, hands-on learner eager to grow into deep learning frameworks, RAG, and vector-database tooling under the team's mentorship.

EDUCATION

BSc (Hons) Software Engineering

Sunway University

GPA 3.7 · Dean's List every semester

Expected Aug 2027

Selangor, Malaysia

Software Engineering

Alma Almaty Management College

GPA 3.6

2021 - 2024

Almaty, Kazakhstan

EXPERIENCE

Lab Apprentice

HUMAC Lab

Feb 2025 - May 2026

Selangor, Malaysia

- Coordinated task tracking and sprint planning via Jira for a cross-functional team building a library robot from concept to deployment.
- Developed the Datastation App to scan library books and sync them over the network into the robot's database, handling 200+ book scans in a single sync.
- Tested and debugged hardware-software integration, resolving syncing issues between the scanning app and the robot's onboard systems.

Python Raspberry Pi SQLite Jira

Automation Intern

Galanx Bottlers

Oct 2023 - Dec 2023

Almaty, Kazakhstan

- Automated the company's daily birthday-card process end-to-end - extracting that day's birthdays from the employee database, transforming the data into personalized messages, and auto-generating and emailing cards to every department, removing a manual daily HR task.
- Built a Telegram bot query interface that returns any employee's details in a single message, replacing a multi-click lookup process and cutting search time for HR and staff.
- Built an HR FAQ Telegram bot backed by a database of common employee questions, escalating unanswered queries to a dedicated web dashboard - reducing repeat walk-in questions to HR.

Python Telegram Bot API MySQL Automation

PROJECTS

License Plate Detection & Computer Vision Experiments

Personal Project

2026

- Built a Python computer vision pipeline that detects vehicle license plates in images/video and reads the plate numbers via OCR, using a pretrained detection model as the base.
- Explored real-time video processing with OpenCV, including face detection and recognition, face blurring, on-frame drawing/annotation, and frame-level filters (e.g., black-and-white conversion).

Python OpenCV Computer Vision OCR Object Detection

Used Car Price Predictor

Jul 2026

Personal Project

- Cleaned and engineered features from a ~19k-listing scraped used-car dataset, then trained and evaluated a scikit-learn regression pipeline (median error $\approx 14\%$, $R^2 \approx 0.71$), served through a Flask web app deployed on Vercel for instant price estimates.

Python scikit-learn Pandas Flask

AI-Powered Telegram Expense Tracker Bot

May 2026

Personal Project

- Built a Telegram bot query interface using Claude AI to automatically record and categorize personal expenses, generating aggregated spending reports for any custom date range to support quick financial decisions.

Python Claude AI MySQL

AI Growth Coach Platform

Aug 2025 - Feb 2026

- Co-built a full-stack AI-coaching web platform (PHP/Node.js backend, JS frontend) used by 100+ users, with Razorpay subscription billing - deployed live on Namecheap hosting.

PHP Node.js JavaScript

SKILLS

Programming Languages	Python, SQL, Java, JavaScript, TypeScript, PHP
AI & Machine Learning	OpenCV (computer vision, OCR), scikit-learn, Pandas, Claude AI / OpenAI API integration, Prompt Engineering, Jupyter
Tools & Platforms	REST APIs, MySQL, Git, Telegram Bot API, Node.js, Flask, Razorpay
Fundamentals	Data Structures & Algorithms, Object-Oriented Programming
Deployment & Hosting	Vercel, Namecheap, Hostinger

LANGUAGES

English	Fluent
Chinese	HSK 1
Russian	Native
Kazakh	Native

ACHIEVEMENTS

WorldSkills Competition	2024
3rd place; built a full-stack web, mobile, and desktop booking app in a 2-day competition.	
Programming Competition	2023
Competed in a college-level algorithmic problem-solving contest.	
Step Academy	2022
3-year programming & design program covering Python, Java, C++, JavaScript, Unity, Arduino, and IoT.
