

Sanzhar Kuatov

Software Engineering Student · Building AI-powered products

sanzarkuatov@gmail.com | github.com/sanzhar-kuatov | linkedin.com/in/sanzhar-kuatov-a8809431a

EDUCATION

BSc (Hons) Software Engineering - Sunway University × Lancaster University

Expected Aug 2027

GPA 3.7 · Dean's List every semester

Software Engineering - Alma Almaty Management College

2021 - 2024

GPA 3.6

EXPERIENCE

Automation Intern - Galanz Bottlers

Oct 2023 - Dec 2023

- Automated the company's daily birthday-card process - pulling that day's birthdays from the employee database and auto-generating and emailing personalized cards to every department, removing a manual daily HR task.
- Built a Telegram bot that returns any employee's details in a single message, replacing a multi-click lookup process and cutting search time for HR and staff.
- Built an HR FAQ Telegram bot backed by a database of common employee questions, escalating unanswered queries to a dedicated web dashboard - reducing repeat walk-in questions to HR.
- Built a Telegram bridge to the company's IT Helpdesk system, extending IT support access to offices outside Almaty with no direct system access.

Python Telegram Bot API MySQL Automation

PROJECTS

AI Growth Coach Platform

- Developed a full-stack web platform, used by 100+ users, to track personal goals, habits, and daily reflections guided by an AI coach; integrated Razorpay for subscription payments.

Python Scikit-learn Jupyter Razorpay

AI-Powered Telegram Expense Tracker Bot

- Built a Telegram bot using Claude AI to automatically record and categorize personal expenses and generate spending reports for any custom date range.

Python Claude AI Pandas MySQL

Discord Member Verifier

- Automated student verification for a university club's Discord server using Google Sheets as a live member registry - verified 15+ members, cutting onboarding time by 5–10 minutes per signup.

Python Google Sheets API Discord Bot

Datastation App

- Designed and developed an app that scans library books and syncs them over the network into a library robot's database - handling 200+ book scans in a single sync.

SKILLS

Fundamentals	Data Structures & Algorithms, Object-Oriented Programming
Languages	Python, Java, JavaScript, TypeScript, SQL
Tools & Platforms	REST APIs, MySQL, Git, Telegram Bot API, Node.js, Claude AI / LLM integration, Razorpay

ACHIEVEMENTS

- **WorldSkills Competition (2024)** - 3rd place; built a full-stack web, mobile, and desktop booking app in a 2-day competition.
- **Programming Competition (2023)** - Competed in a college-level algorithmic problem-solving contest.
- **Step Academy (2022)** - Completed a 3-year programming and design program (HTML/CSS, Python, C++, Java, Swift, JavaScript, Unity, Arduino, IoT).
